

Improve Profitability by Improving In-building Communications

The always-connected workforce has a huge appetite for mobile coverage. This has made the quality of mobile communications inside your building a critical factor in determining how tenants and visitors perceive your space.

Cellular networks are blocked by the very things you and your tenants love. LEED materials, world-class architecture, and surrounding buildings in your desirable location. These can cause significant dead spots and signal attenuation. On top of that, there is a confusing array of possible solutions.

Read [Seamless Communications: The Key to Improving the Tenant Experience](#) to cut through the noise and get answers:

- What are the amenities that most improve the tenant experience?
- What are the pros and cons of wired, Wi-Fi and cellular in-building options?
- What is the best solution for seamless, scalable wireless coverage?

Protect your tenant loyalty and bottom line with reliable, in-building mobile service. SOLiD has the experience and industry knowledge to demystify in-building mobile and implement the solutions your tenants and visitors need.
